

- An ERP based serial production environment requires effective communication through interfaces between the ERP application and the ZEUS®PDC system.
- Tool making requires individual in-plant controls and recording without ERP communication.
- Engineering requires project oriented performance recording with planned versus actual time calculations.

Options

- Analysis and recording of efficiency rates
- Transfer of bonuses and efficiency rates to standard payroll programs
- Integrated report generator
- Comprehensive validation checks
- Milestone function
- Operation sequence planning
- Group work
- Monitoring & analysis of supply yields
- ODBC import/export for communication with ERP systems
- ASCII import/export
- Overhead time allocation for collective orders
- Parallel order processing
- Allocation of absences
- Default values and time types
- Print out of labour tickets

The power of innovation of the ISGUS group with its close net of strong distribution partners as well as an entirely customer orientated and excellent training and service program, based on the experience resulting from over 14,000 installations worldwide, characterize ISGUS As being one of the strongest and most reliable partners for time management.

Time Management Solutions for Today's World

Discover and fully utilise resources

Improve production management
Reduce production times
Control production costs

ZEUS@PDC delivers efficient production management supporting companies to maximise their investment in staff and resources and reduce overhead costs.

ZEUS@PDC provides real time data for the management of production processes and project costs in your company.

Fast and accurate time recording of operations and processes is made on the PDC terminals and PC based clients across all production areas from design to despatch.

Access to real time production data is the basic requirement for management and control of production sequences leading to reduced process times, effective cost controls, optimised planning sequences and detailed information in respect of both lead & setup times.

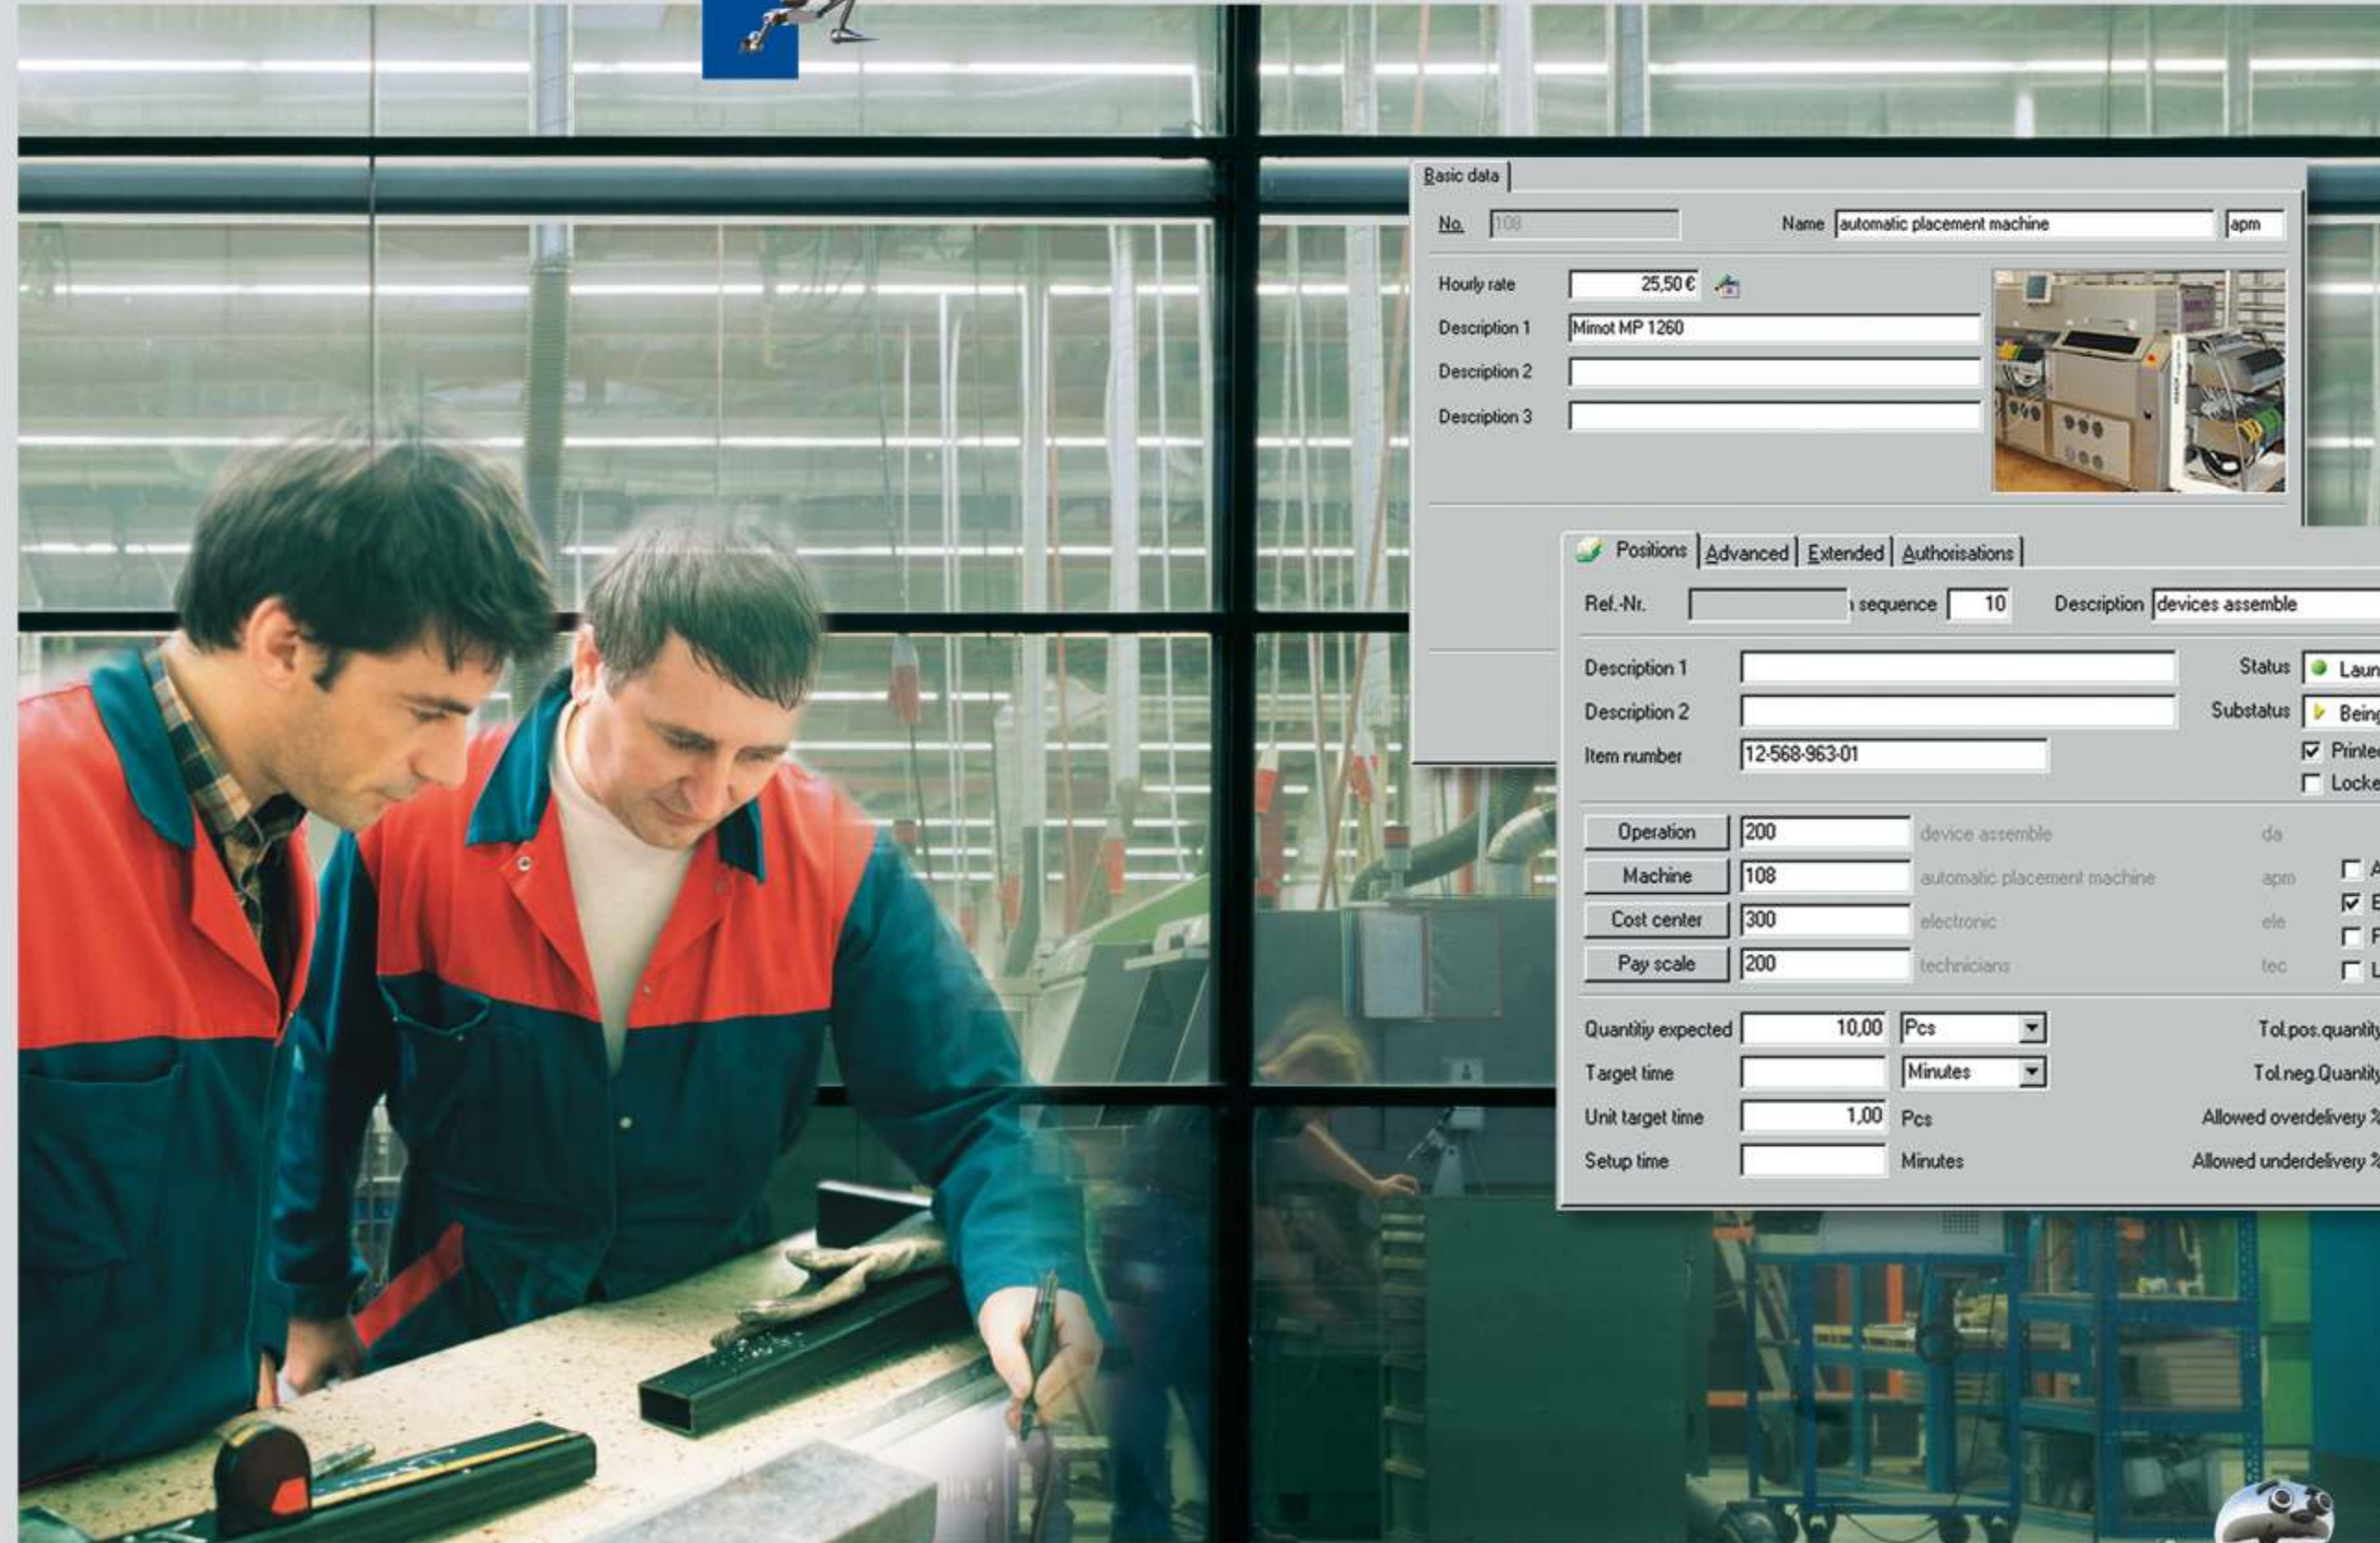

Comprehensive validation checks, operation sequence planning and milestone functions ensure accurate recording of production times.

Detailed information relating to work progress, good yields, scrap rates and delivery times is presented on the booking terminals and PC screens.

Management information is available at any time for analysis of operational performance, comparative values across business units, order history and target versus actual times.

The PDC solution from ISGUS is always tailored to your individual requirements irrespective of the type of solution required. The PDC application is suitable for simple job or project costing solutions to bidirectional data transfer with major ERP applications.

ZEUS@PDC is a modular system which can be enhanced with the addition of further modules at any time.

Project Time Recording

Order and project based time recording for small and mid-sized businesses across trade and industry. ZEUS@PDC records and processes productive / non-productive times per employee, prints job and route cards, manages customer orders and delivers target times per order/project by cost centre.

Shop Floor Data Collection

Shop Floor Data Collection for mid-sized businesses in the manufacturing and service sectors. ZEUS@PDC records and processes productive / non-productive times per employee by order number, operation type, cost centre and cost unit along with management of operational sequences, machine cost analysis, target times, yields, order management and order progress centre.

ERP/PPS Communication

Shop Floor Data Collection with automated bidirectional ERP/PPS communication for SME's supporting flexible parameterisation of data import & export to most major ERP vendors. Comprehensive validation checks at the booking terminals effectively eliminate operator errors.
